

Minimum Disclosure Document - 31 March 2024

FUND PROFILE

The Taquanta Bond FR Fund is actively managed and aims to exceed the returns generated by the benchmark over a 3-year rolling period where portfolio position deviation from the benchmark is minimised. The portfolio is not a tracking fund, but will closely replicate the composition of the benchmark and aims to over time generate returns in excess of the benchmark.

FUND OBJECTIVE

The Fund will aim to outperform the JSE/ASSA All Bond Index (ALBI) Index over a rolling 3-year period with a low tracking error.

INVESTMENT STRATEGY

The fund will predominately invest in bonds but can also invest in a diversified range of listed and unlisted instruments, including government bonds, semi-government bonds, corporate bonds, fixed deposits, assets in liquid form, money market instruments and other interest-bearing instruments that offer value on a relative basis. The fund will predominately invest in South African markets but is permitted to include investments in offshore jurisdictions subject to the investment conditions determined by the legislation from time to time. The fund is looking to achieve its investment objective by actively selecting an optimal blend of assets from its investment universe.

ASSET ALLOCATION

Bond exposure is achieved via investments in the derivative market.

INFORMATION & DISCLOSURES

FEES

Service Fee (excl. VAT p.a.):	0.07%
Performance Fee (excl. VAT p.a.):	66.67%
A performance fee is charged if the gross return of the participatory interest, after the deduction of the minimum annual service fee (if applicable) over the 365-day rolling period exceeds the specified benchmark over the same period, provided that the total fee payable may be limited to a maximum fixed annual service charge.	
Cost Ratios (incl. VAT):	
* Total Expense Ratio (TER) ² :	0.88%
* Transactions Costs Ratio (TC%):	0.00%
* Total Investment Charges (TIC%) ¹ :	0.88%
* Performance Fee (PF) Included in TER:	0.77%

¹ Total Investment Charges (TIC%) = TER (%) + TC (%). ² The Total Expense Ratio (TER%) of a portfolio, expressed as a percentage of the daily average value of the portfolio, is calculated over a period of usually a financial year and represents a measure of the portfolio's assets that were relinquished to meet portfolio operating costs, including charges, levies and fees. Typical expenses which are deducted from a portfolio include service charges, taxes, trustee fees and audit fees. Unit prices are published daily on the Manager's website. Investor instructions received after 14:00pm shall be processed the following business day.

MARKET COMMENTARY

The United States (U.S.) Federal Reserve (Fed) announced at its March meeting that it would maintain the overnight federal funds rate at the current range of 5.25 percent to 5.5 percent. Projections published at the Fed's March 2024 meeting showed that policymakers expect to deliver three (3) rate cuts this year. This remains in line with expectations derived from the futures market. While U.S. inflation may be receding, growth is however resilient, muting the urgency to adjust the policy rate over the near-term.

President of the European Central Bank (ECB), Christine Lagarde, also announced that the three (3) key ECB rates will be left unchanged. However, the ECB President lamented the risks to economic growth being tilted to the downside. Consumer spending is tepid. Employers are posting fewer job vacancies. Fiscal and structural policies are facing geopolitical headwinds. To this end, the latest ECB staff projections indicate downward revisions to inflation, which is expected to fall below target within the next two years.

At their last meeting, the South African Reserve Bank's (SARB) Monetary Policy Committee (MPC) also decided to leave the repo rate unchanged at 8.25 percent. The decision to pause was unanimous and in line with surveyed expectations. The economy of South Africa is unlikely to grow above full employment over the foreseeable future. This is mainly owed to sub-investment ratings, deteriorating infrastructure, and growing levels of political uncertainty. Slowing economic activity has also played a major role in reducing inflation, which continues to remain vulnerable to external shocks and increases in administered prices.

Long maturity bond (SAGBs) yields were up 54 basis points (bps) versus the previous month. Non-residents were net sellers as the R6.7 b outflow in March followed February's R2.8 b outflow. The year-to-date net cumulative outflow amounts to R8.9 b.

The nominal yield curve has since bear steepened, driven mainly by benign economic prospects as well as the rising political uncertainties of 2024. On the other hand, short maturity bond yields remained flat, buoyed by the lack of urgency in global monetary policy adjustments.

In the month of March, the ALBI TR ZAR Index was down 1.93% m/m (and up 4.2% y/y), while the CILI TR ZAR Index rose by 0.27% m/m (and up 5.7% y/y).

Please Note : The above commentary is based on reasonable assumptions and is not guaranteed to occur.

GLOSSARY

Net Asset Value (NAV): Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.

Highest & Lowest Return: The highest and lowest rolling twelve-month performance of the portfolio since inception.

Total Expense Ratio (TER): Reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's.

Transaction Costs (TC): Is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns.

Annualised Return: Is the weighted average compound growth rate over the performance period measured.

Total Investment Charge (TIC): Should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.

Total Investment Charges: (TIC%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Derivative / Financial Instrument: A contract that derives its value (positive or negative) from another asset

FUND RISK

Derivative Risk: Derivative positions are financial instruments that derive their value from an underlying asset. Derivatives are exposed to implicit leverage which could result in magnified gains and/or losses on the portfolio.

Volatility Risk: Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at Risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.

Equity Risk: Applies to investment in shares or derivatives based on shares. The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares. Equity risk can either be systematic risk which is risk to the entire market based on political and economic indicators or unsystematic risk which is company specific and includes risk relating to company profits, future prospects and general consensus on the company or sector.

Concentration and Sector Risk: A large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a portfolio will material impact the returns of the portfolio more so than diversified portfolios

Interest Rate Risk: The values of bonds and other debt securities are inversely proportional to the change in interest rates. Interest rate risk is generally greater for investments with longer maturities as well as when the market does not expect a change in the interest rates

Credit Default Risk: The risk that the government entity or company that issued the bond will run into financial difficulties and won't be able to pay the interest or repay the principal at maturity. Credit risk applies to debt investments such as bonds. The higher credit rating the less likely the possibility of the issuing company defaulting.

Currency/Exchange Rate Risk: Assets of a fund may be denominated in a currency other than the Base Currency of the fund and changes in the exchange rate between the Base Currency and the currency of the asset may lead to a depreciation of the value of the fund's assets as expressed in the Base Currency.

MANDATORY DISCLOSURE:

Collective Investment Schemes are generally medium to long-term investments. The value of participatory interests (units) may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges, minimum fees, and maximum commissions, as well as detailed description of how performance fees are calculated and applied, is available on request from FundRock Management Company (RF) (Pty) Ltd ("the Manager"). The Manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressure and in such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commissions and incentives may be paid, and if so, are included in the overall costs. The Manager may close the portfolio to new investors in order to manage it efficiently according to its mandate. Prices are published daily on the Manager's website. Additional information, including Key Investor Information Document ("KIID"), Minimum Disclosure Document ("MDD"), as well as other information relating to the basis on which the Manager undertakes to repurchase participatory interests offered to it, and the basis on which selling and repurchase prices will be calculated, is available, free of charge, on request from the Manager. The value of an investment is dependent on numerous factors which may include, but not limited to, share price fluctuations, interest and exchange rates and other economic factors. The Manager ensures fair treatment of investors by not offering preferential fee or liquidity terms to any investor within the same strategy. The Manager is registered and approved by the Financial Sector Conduct Authority ("the Authority") under the Collective Investment Schemes Control Act No. 45 of 2002 ("CISCA"). The Manager retains full legal responsibility for the portfolio.

The Financial Services Provider ("FSP"), Taquanta Asset Managers (Pty) Ltd, FSP No. 618, is authorised under the Financial Advisory and Intermediary Services Act 37 of 2002 to render investment management services. The annualized total return is the average return earned by an investment each year over a given time period, since the launch date of the portfolio. Actual annual figures are available from the Manager on request. The highest and lowest one (1) year returns represent the highest and lowest actual returns achieved during a 12-month rolling period year since the first launch date of the portfolio. The performance figures are the yields on a Net Asset Value ("NAV") basis. The yield figure is not a forecast. Performance is not guaranteed, and investors should not accept it as representing expected future performance. Individual investor performance may differ as a result of initial fees, time of entry/actual investment date, date of reinvestment, and dividends withholding tax. Performance is calculated for a lump sum investment on a NAV. The performance figures are reported net of fees with income reinvested. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.
